

A solution for ambulance, hospitals, pharmacies and aged care facilities to manage Controlled Drugs.

Imagine no more controlled drug register books and a single, closed loop Medication management system!

About Healthcare Software

Founded in 2005, HCS initially created the first software solution for clinical pharmacy. This has grown to be a multi-disciplinary clinical information system, with a particular emphasis on complete closed loop medication management and clinical communications.

HCS has state-wide implementations across 4 States in Australia and is used in over 200 hospitals, 300 health centres and by over 30,000 primary care providers.

For information regarding HealthCare Software, our Software or any e-health matter in general, please contact us on +61 3 6224 9955 or visit our website.

About

StockInsite is designed to deliver complete management of controlled drugs across a large organisation such as a hospital, ambulance service, aged care facility or pharmacy. It includes full end-to-end controlled drug management and reporting as well as incident management, fraud detection and a range of other features.

It provides a comprehensive suite of automated processes, functions and integrations to seamlessly manage and report on medication related distribution and administrative activities.

StockInsite is true cloud or locally installed software. It is scalable and captures the needs and uses across an organisation down to a individual user level.

Features for system users

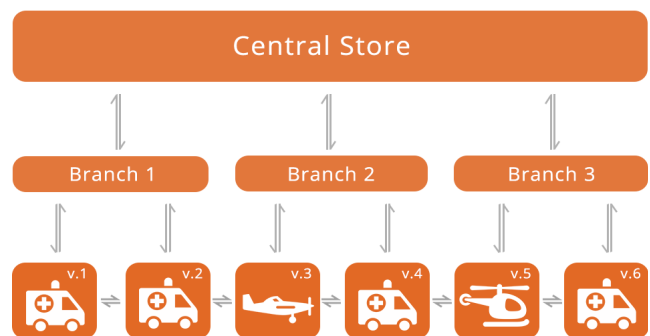

- **Centralised system** that allows whole of organisation information to be managed effectively and accurately from a single and integrated source;
- **Connected to human resource and roster systems** for user authentication;
- **Electronic solution** replacing paper-based systems with device-based software;
- **Closed loop tracking** from distribution to storage to administer with full reconciliation and issues escalation;
- **Web based system** that works over the internet with a web browser, working with any desktop, tablet, or mobile device;
- **Automated notifications and escalations** for administrative activities capturing day-to-day usage as well as audit functions, stock re-ordering, discrepancies and unusual behaviour;
- **Configurable** to allow usage and monitoring to be tailored to the individual needs of a location, department or organisation;
- **Time saving** by streamlining and automating recording of events, reconciliation and reporting;
- **User friendly** and easy to learn requiring minimal user training;
- **Enhanced security** by enforcing accountability and audit reporting.

Features for Managers

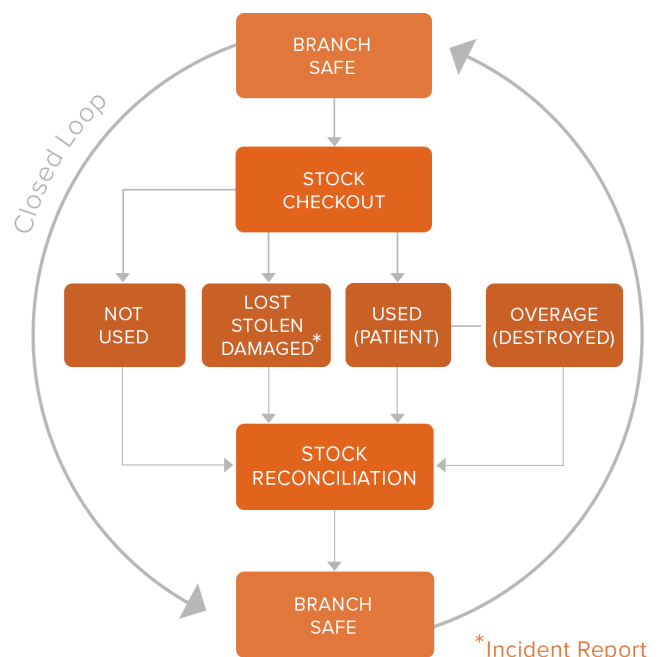

- **Insightful analytics** reporting in real time on inventory across the whole organisation improving stock control and accountability;
- **Single point, enterprise-wide monitoring and reporting on controlled drugs**, including usage, distribution, staff management, issues escalation and fraud detection. Electronic solution replacing paper-based systems with device-based software;
- **Legal and regulatory compliance** obligations can be met including operational processes, prescribing trends and high-volume prescribing;
- **Out of the Box functionality** that requires minimal implementation and configuration whilst still accommodating organisation specific requirements;
- **Data can be exported as CSV** file allowing for full transaction reporting on a range of variables including; person, location, event, medicine, stock movement etc;

- **Standardised system** ensures consistency in practice across the whole organisation;
- **User access and authorisation** can be tailored to use existing user login credentials or system unique login with automated password rotation and management tools;
- **Web based system** removes the need to manage individual instances dramatically saving on time and costly maintenance activities;
- **Standardised reports and templates.**

Supply Workflow: Ambulance Service Distribution

Paramedic Workflow

Overall Benefits

- Governance and Regulatory compliance;
- Significantly reduce the risk of medication misuse and theft;
- Eliminates paper-based systems; and
- Trackable and recorded information which is logged for reconciliation and audit reporting.
